

Mechanistic Pathways of Trance Channeling

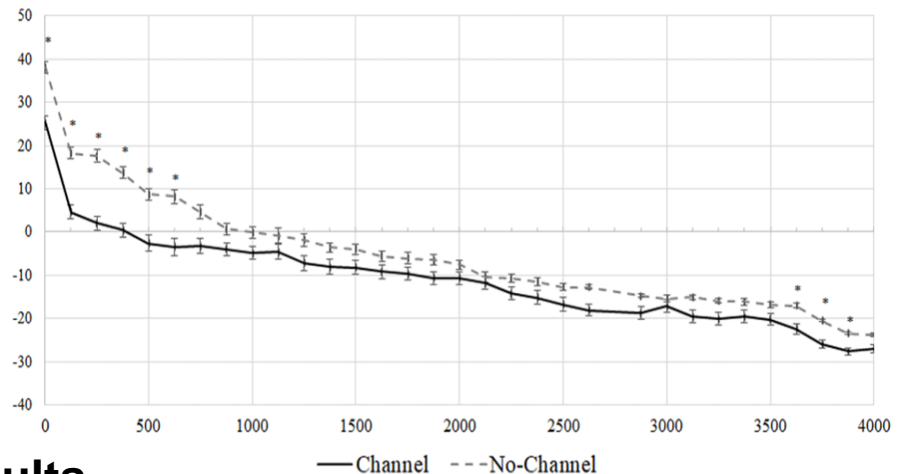

Helané Wahbeh, Arnaud Delorme (BIAL 72/16)

Consciousness – Incorporation

Voice Analysis Power at Various Frequencies

Results

- Demographics, perception of the source, purpose, utility and content of channeled information similar to other studies
- Participants aware of their experience (i.e., not in full trance)
- Varying levels of perceived incorporation (i.e., control of their body)
- Increase in voice arousal and power (dB/Hz) during channeling
- No difference in EEG frequency power, ECG, GSR and respiration
